

Pipex px[®]

Producing excellence

FRP Baffle Walls...

Optional Extras: weir plates, scum boards or sluice gates

Corrosion Resistant FRP Baffle Wall

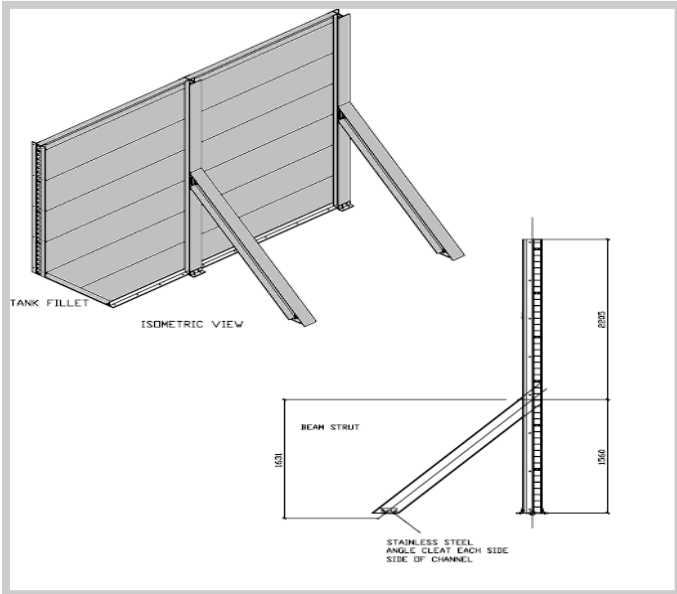

Installed around existing Structure

Pipex px[®] Baffle Walls are specifically designed to create separate zones within existing or new tanks to allow treatment processes to take place. These light weight baffle walls provide a strong, versatile water separation system which makes them ideal for waste water treatment tanks (WWTT). Site installation is simple and fast.

Pipex px® FRP Baffle Walls are composed of strong, light weight FRP panels & supporting brackets and can be manufactured to suit new or existing water treatment tanks.

Pipex px® can provide detailed surveys and engineered designs including FRP support columns, struts, resin anchors and other fixing solutions.

Structures are supplied prefabricated kit form for rapid site assembly and installation.

Baffle Wall Applications

- px Waste water tanks
- px Aeration tanks
- px Chemical treatment tanks
- px Storm drainage tanks
- px Retention tanks
- px Contact chambers

Pipex px® Product Unique Selling Points

	Durable & Corrosion Resistant		Virtually Maintenance Free
	Lightweight		Transparent to Radiowaves
	Easy to Install		Impact Resistant
	Strong		Low Electrical & Thermal Conductivity
	Meets Quality Assurance Standard		Cost Effective Solutions
